

Weather App (Python Tkinter Project)

Project Overview

This is a simple Weather Desktop Application built using Python Tkinter. It fetches real-time weather data using wttr.in API and displays it in GUI.

Intern Details

- 1 InternID: CITS1859
- 2 Full Name: Snehal Bhandarkar
- 3 No. of Weeks: 4 weeks
- 4 Project Name: Weather App
- 5 Project Scope: GUI development using Python and API integration

Features

- 1 Simple Tkinter GUI
- 2 Real-time weather fetching
- 3 Input validation
- 4 Error handling
- 5 Lightweight application

Technologies Used

- 1 Python
- 2 Tkinter
- 3 Requests library
- 4 wttr.in API

How to Run

- 1 Install requests: `pip install requests`
- 2 Run file: `python weather_app.py`

Learning Outcomes

- 1 Tkinter GUI development
- 2 API integration in Python
- 3 Error handling
- 4 Real-time data fetching
